

Helping Healing Hands

Fast & Accurate Instant Documentation

Exceptionally stable high-quality prints give on-the-spot confirmation of the image you need in remarkably fine detail and can be immediately entered into patients' notes. Instant photos can help measure the recovery rate of wounds such as ulcers and pressure sores.

Effective Communication

A picture speaks a thousand words, this enables you to communicate clearly without long written reports. Different staff members are also able to get consistent and accurate information about injuries, conditions, surgical revisions and wound healing.

Improved Patient Care

Photos can provide reassurance to a patient by showing them how a wound is healing or explain what is involved in a particular course of treatment. Seeing the progressive results in a photograph encourages patient treatment compliance. Non contact Polaroid photography is a painless procedure, free from risks of infection and causes no patient discomfort.

Increased Protection

In an increasingly litigious world it makes sense to protect your reputation. Tamper-proof instant prints provide clear evidence to support any disputes.

Ease of Use

Polaroid hand-held cameras are simple to use with no special skills required. Auto exposure and auto-focus ensure sharp, correctly exposed images, while the flash fires with every shot for perfect lighting.

Quick, accurate and objective wound records are an essential part of effective treatment. The Polaroid Macro 5 SLR, HealthCam Kit and the PP46d Digital Photo Printer are designed for use in a health care environment: out patient clinics, hospital wards, general and specialist practices, nursing homes and community care situations.

WOUND CARE DOCUMENTATION

Macro 5 SLR Camera

The Macro 5 SLR close-up camera is invaluable when you need detailed photographs of smaller subjects. When color nuances are important, such as when photographing bruises, burns or wounds, the Macro 5 SLR provides incredible detail, clarity and color accuracy. And obtaining these results couldn't be simpler: an innovative focusing system ensures that your pictures will be flawlessly focused, and as with all our cameras, taking a shot is as easy as pushing a button.

OTHER FEATURES INCLUDE:

Control Pad: Two built-in electronic flashes may be operated independently or together

Viewfinder: Single lens reflex (SLR) with grid screen for consistent framing throughout the healing process

Lenses & magnification: Built-in lenses eliminate need for attachments; magnifications of 0.2X, 0.4X, 1X, 2X, 3X are achieved simply by turning a dial. These magnifications provide repeatability in a healthcare setting for measuring the progress of wounds

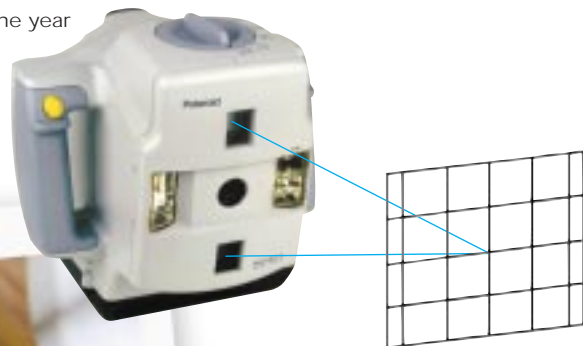

Polaroid color film: Type 990 (recommended), Spectra or Grid Film

Picture size: 4 x 4.06 in. (Image area: 3.6 x 2.9 in.)

Optional accessory: Polarizer filter kit and 5x non-contact lens

Limited Warranty: One year

Tamper-proof, self-developing color prints to track the healing process.

HealthCam Kit

The Polaroid HealthCam Kit is ideally suited for applications such as measuring the recovery rate of leg ulcers and pressure sores. The HealthCam Kit includes an easy-to-use 1200si instant camera for full-body shots. Accessories, included in the kit and described below, also allow you to use this camera for close-ups of wounds and other injuries.

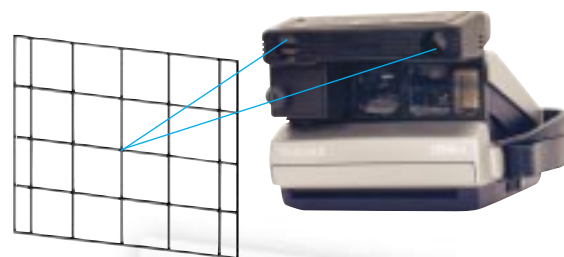

Close-up lens: a Light Lock lens that allows you to take detailed close-ups of injuries without touching the patient or victim

Carrying case: includes storage compartments for camera, lens and extra packs of film

Polaroid color film: Type 990 (recommended), Spectra or Grid Film

Picture size: 4 x 4.06 in. (Image area: 3.6 x 2.9 in.)

Grid Film You can also use Polaroid Grid Film, which produces an instant color print with a grid overlay of 192 squares. Grid Film is ideal for tracking the healing rate of wounds and sores. The squares are lettered A to P horizontally and 1 to 12 vertically, so taking comparison pictures at regular intervals clearly illustrates how a subject changes over a period of time.

PP46d Digital Photo Printer

Create high-quality prints directly from your digital camera's memory card – whenever you need them. Creating photographic prints from your digital camera's memory card has never been easier, thanks to the new Polaroid PP46d photo printer. It lets anyone turn digital files into durable high-quality 4" x 6" prints in less than two minutes through a dye sublimation thermal transfer process (four-pass). Designed for stand-alone use, the PP46d can also print from a computer through a USB connection, giving you the flexibility to edit images before printing.

Sleek, compact design fits – and goes – anywhere.

LCD display panel lets you preview images – and view printer menu options.

Printing options to suit your needs – including five multiple formats and five split-print formats!

Stand Alone Capability to print just from your memory card, plus the flexibility to print from a computer.
